

Ilya Moskovkin

Senior Frontend Engineer · Vue & React · Designer-turned-Developer

Vietnam · Remote (UTC+7) · hello@ilyamoskovkin.com · +84 92 407 78 20 · [GitHub](#) · [LinkedIn](#) · [Portfolio](#)

◆ PROFILE

Senior frontend engineer with 10+ years spanning UI/UX design and production web-app development. I build and drive the frontend for data-heavy SaaS products (dashboards, complex multi-step flows, data visualization, and AI-powered features) in React/TypeScript and Vue. Most recently, I was a senior frontend engineer for a B2B energy-brokerage platform through a full design-system overhaul to a Mantine-based design language. Originally trained as a UI designer, I bring a design-side instinct to dense interfaces and work closely with product, design and backend stakeholders to turn complex requirements into usable, maintainable UI.

◆ WHAT I BRING

- Turn design into pixel-perfect, production-ready UI with smooth interactions, fast load times, and the small details that make an interface feel effortless.
- Build complex SaaS interfaces such as dashboards, multi-step wizards, dynamic forms, and data grids that stay readable under heavy data.
- Work at production level in both Vue (2/3, Nuxt) and React (Next.js), going fullstack with Node, Postgres, and deployment when the project calls for it.
- Run an AI-augmented workflow with Claude Code, Codex, and Cursor as a force multiplier, while owning every architecture and quality call myself.
- Ship AI-powered features in production, from a bill-scanning document tool to a full AI image-generation product.
- Hold quality with real testing discipline across Vitest, Playwright, and Cypress, recently taking a core module from zero to ~80% coverage.

◆ SELECTED PROJECTS

Phosphene phosphene.cc · a graph-based visual prompt workspace for AI image generation; solo design and build. Nuxt 4, Vue 3, tRPC, Prisma/Postgres, Vue Flow, fal.ai + Gemini, Paddle billing.

Broker Online Exchange brokeronlinexchange.com · the B2B energy-brokerage platform (MyServiceCloud) I drove: a full design-system re-theme to AppDirect's design language, production dashboards, and an AI Bill-Scan-to-Quote feature.

Roomboard roomboard.online · a realtime visual collaboration room for moodboards and reviews. Next.js, Pixi.js canvas, Elixir/Phoenix + Supabase realtime.

Anchor anchorapp.cc · a calm daily-ritual app for mood, sleep, intention, and journaling; live now from one Next.js codebase that ships to web, iOS/Android (Capacitor), and desktop (Electron).

◆ PROFESSIONAL EXPERIENCE

Founder & Frontend Engineer, Phosphene

May 2026 – Present · Remote

Self-funded AI SaaS product

- Designed and engineered a production AI image-generation workspace end-to-end.
- Built complex graph-based prompt workflows and managed infrastructure, API integration, and deployment.

Senior Frontend Developer, Broker Online Exchange (acquired by AppDirect)

Aug 2021 – May 2026 · Remote

My Service Cloud: B2B SaaS for energy-brokerage workflows (CRM, pricing, contracts, commissions, renewals)

- Owned the frontend across the platform: a Vue 2/3 SPA at the core, a full design-system re-theme to AppDirect's Mantine-based design language, and React (Mantine, Zustand) for new feature areas.
- Built production dashboards and data-viz: DevExtreme charts/grids, interactive SVG maps of US energy-distribution data, and dense filterable tables that stay readable.
- Engineered the frontend of an AI Bill-Scan-to-Contract feature (Vertex AI / Gemini): prompt design, response handling, AI failure states, logging, cost monitoring.
- Vue phase (3 yrs): multi-step contract/quote/proposal wizards, dynamic forms, Vuex/Pinia, REST/GraphQL across ~40 Vue apps in a mixed codebase with legacy PHP/Yii modules.
- Drove test coverage on a core module from 0 to ~80% (Vitest) and coordinated a cross-team Cypress E2E effort.

Frontend Developer, Ecor Rouge

Oct 2019 – Aug 2021 · Part-time / Remote

- Implemented responsive dashboard interfaces from design files into Laravel/Vue.js apps; built and refined Vue components, layouts and styles in close work with backend devs.

UX/UI Designer · Frontend Developer, Couture Lane

Jul 2015 – Oct 2019 · SF Bay Area / Remote

- Designed and implemented customer-facing web interfaces, gradually expanding from UI/UX design into frontend development; built a strong design-to-code workflow.

◆ TECHNICAL STACK

Languages	TypeScript, JavaScript ES6+, HTML5, CSS3, WebAssembly (Wasm)
React	React 19, hooks, Next.js (App Router), TanStack Query, Zustand, Mantine UI
Vue	Vue 2/3, Nuxt, Vuex, Pinia, composables
Data viz	DevExtreme, D3.js, SVG, interactive maps, dashboards
AI	Vertex AI, Gemini, prompt design, LLM response handling, cost monitoring
APIs	REST, GraphQL, SPA architecture, state management
Styling	Tailwind, SASS/LESS, Material UI, shadcn
Testing	Cypress, Vitest, Jest, Git/GitHub, Jira, async remote

◆ WORKING STYLE

- **Product-minded:** I care about the whole user flow, beyond a single component or ticket.
- **Comfortable in imperfect legacy systems:** I ship useful improvements while gradually reducing complexity.
- **Strong remote habit:** concrete demos, clear PR notes, visible progress, small shippable slices.
