

Ilya Moskovkin

Senior Product Engineer · Full-stack · Design + Eng

Vietnam / Remote · hello@ilyamoskovkin.com · +84 92 407 78 20 · [GitHub](#) · [LinkedIn](#) · [Portfolio](#)

◆ PROFILE

Senior product engineer who owns features end to end — shaping the product, designing the system, writing the code, and shipping to real users. 10+ years across frontend, backend and APIs, with a UI design background that makes user experience the default, not an afterthought. I build and run my own product, phosphene.cc, solo — React/Next.js and Node, Postgres, payments and deployment, idea to production. I think in products and outcomes, not tickets: ship fast, gather feedback, and iterate on what real usage shows. Most recently I led the frontend of a B2B SaaS platform through a full Vue → React micro-frontend migration.

◆ CORE STRENGTHS

End-to-end ownership: phosphene.cc, built and run solo — product, design, frontend, Node backend, Postgres, payments and infra. Idea to production, used by real customers.

Full-stack web: React / Next.js, Node, TypeScript across the whole request path — REST / tRPC / GraphQL, Postgres / Prisma, cloud-native (Vercel, AWS / S3, Hetzner).

Product & UX mindset: UI design background; I turn real operational and user problems into simple, intuitive flows and care why something is built, not just how. Pixel-perfect, fast, accessible.

Automation & AI in production: shipped an AI Bill-Scan → Quote feature (Vertex AI / Gemini) and an AI image-generation product; use Claude Code + Codex daily to ship faster without giving up the architecture calls.

Data-heavy SaaS at scale: dashboards, complex multi-step flows, data viz and smooth UI under heavy data; led a B2B SaaS frontend for ~5 years and a full Vue → React micro-frontend migration.

Ship fast & reliable: frequent releases, clean PRs, concrete demos; Vitest / Cypress / Playwright. Async-remote has been my default for 10+ years.

◆ SELECTED PROJECTS

Phosphene [phosphene.cc](#) — a graph-based visual prompt workspace for AI image generation; solo design + build. Nuxt 4, Vue 3, tRPC, Prisma/Postgres, Vue Flow, fal.ai + Gemini, Paddle billing.

Broker Online Exchange [brokeronlinexchange.com](#) — the B2B energy-brokerage platform (MyServiceCloud) I led: Vue → React micro-frontend migration, production dashboards, and an AI Bill-Scan → Quote feature. The app is behind login; the company site is public.

Roomboard [roomboard.online](#) — a realtime visual collaboration room for moodboards and reviews. Next.js, Pixi.js canvas, Elixir/Phoenix + Supabase realtime.

Earlier: BrewOptix (brewery dashboard, Figma → Vue), upRive (Laravel/Vue/Tailwind marketing app), DashCaster (remote-controlled dashboard builder), Difdash (responsive dashboard from design assets).

◆ PROFESSIONAL EXPERIENCE

Lead Frontend Developer — **Broker Online Exchange** (later acquired by AppDirect)

Aug 2021 – Present · Remote

My Service Cloud — B2B SaaS for energy-brokerage workflows (CRM, pricing, contracts, commissions, renewals, dashboards)

- ◆ Led the frontend across the platform through two stack phases: a Vue 2/3 SPA, then a migration to React/TypeScript micro-frontends (Mantine, Zustand, module federation). Set patterns, owned review, mentored juniors.
- ◆ Built production dashboards and data-viz — DevExtreme charts/grids, interactive SVG maps of US energy-distribution data, dense filterable tables that stay readable.
- ◆ Led the frontend of an AI Bill-Scan → Contract feature (Vertex AI / Gemini): prompt design, response handling, AI failure states, logging, cost monitoring, field mapping to product entities.
- ◆ Vue phase (3 yrs): multi-step contract/quote/proposal wizards, dynamic forms, Vuex/Pinia, REST/GraphQL across ~40 Vue apps in a mixed codebase with legacy PHP/Yii modules.
- ◆ Drove test coverage on a core module from 0 → ~80% (Vitest) and coordinated a cross-team Cypress E2E effort (auth isolation, shared architecture).

Frontend Developer — **Ecor Rouge**

Oct 2019 – Aug 2021 · Part-time / Remote

- ◆ Implemented responsive dashboard interfaces from design files into Laravel/Vue.js apps; built and refined Vue components, layouts and styles in close work with backend devs.

UX/UI Designer · Frontend Developer — **Couture Lane**

Jul 2015 – Oct 2019 · SF Bay Area / Remote

- ◆ Designed and implemented customer-facing web interfaces, gradually expanding from UI/UX design into frontend development; built a strong design-to-code workflow.

UI Designer — **Soventa**

Mar 2013 – Jul 2014 · Almaty, KZ

- ◆ Designed UI screens and visual assets for web interfaces; early experience collaborating with development teams on implementation-ready designs.

◆ TECHNICAL STACK

Languages	TypeScript, JavaScript ES6+, HTML5, CSS3
React	React 19, hooks, Next.js (App Router), TanStack Query, Zustand, Mantine UI, module federation, TypeScript
Vue	Vue 2/3, Nuxt, Vuex, Pinia, composables
Data viz	DevExtreme, D3.js, SVG, interactive maps, dashboards
AI	Vertex AI, Gemini, prompt design, LLM response handling, cost monitoring
APIs	REST, GraphQL, SPA architecture, state management
Styling	Tailwind, SASS/LESS, Material UI, shadcn
Testing	Cypress, Vitest, Jest, Git/GitHub, Jira, async remote

◆ WORKING STYLE

- ◆ Product-minded: I care about the actual user flow, not just the component or ticket in isolation.
- ◆ Comfortable in imperfect legacy systems — ship useful improvements while gradually reducing complexity.
- ◆ Strong remote habit: concrete demos, clear PR notes, visible progress, small shippable slices.
